

Ideation Phase

Define the Problem Statements

Date	29 September 2026
Team ID	SWTID-2026-4934
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

Customer Problem Statements

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A service desk agent who logs and triages incidents in ServiceNow	Create high-impact incidents that are complete, correctly prioritized and routed to the right team	Assignment group, Assigned To and Urgency are often missed or set inconsistently, and incomplete records still get saved	The Incident form relies on manual awareness and has no client-side rules to enforce mandatory fields or auto-set values when Impact is High	Frustrated and anxious about rework, delayed routing and SLA breaches
PS-2	An incident manager responsible for SLA compliance and service quality	Trust incident data for reporting, routing and SLA tracking	Records arrive incomplete or inconsistent, and State can be changed straight from the list view without any form checks	There are no UI Policies or Client Scripts to validate data at save time or to control edits made in the list	Concerned and unsure about report accuracy, and pressured when SLAs are missed

PS-1 - Customer view

I am	<i>Who?</i>	A service desk agent who logs and triages incidents in ServiceNow
I'm trying to	<i>Goal</i>	Create high-impact incidents that are complete, correctly prioritized and routed to the right team
but	<i>Barrier</i>	Assignment group, Assigned To and Urgency are often missed or set inconsistently, and incomplete records still get saved
because	<i>Root cause</i>	The Incident form relies on manual awareness and has no client-side rules to enforce mandatory fields or auto-set values when Impact is High
which makes me feel	<i>Emotion</i>	Frustrated and anxious about rework, delayed routing and SLA breaches

PS-2 - Customer view

I am	<i>Who?</i>	An incident manager responsible for SLA compliance and service quality
I'm trying to	<i>Goal</i>	Trust incident data for reporting, routing and SLA tracking
but	<i>Barrier</i>	Records arrive incomplete or inconsistent, and State can be changed straight from the list view without any form checks
because	<i>Root cause</i>	There are no UI Policies or Client Scripts to validate data at save time or to control edits made in the list
which makes me feel	<i>Emotion</i>	Concerned and unsure about report accuracy, and pressured when SLAs are missed
