

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	29 September 2026
Team ID	SWTID-2026-4934
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Brainstorm & idea prioritization

Session for the project **Implement Client Script & UI Policy (Incident)**: how to enforce clean Incident data at form level.

- 10 minutes to prepare
- 1 hour to collaborate
- 5 participants

Before you collaborate

Preparation done before the ideation session on Incident client-side controls.

🕒 10 minutes

A Team gathering

Person 1 to Person 5 (ServiceNow admin/developer, service desk agent, incident manager, tester, documentation lead) joined the session and reviewed the Incident form.

B Set the goal

Decide how UI Policies and Client Scripts can make Incident records complete, consistent and valid before they are submitted.

C Prepare the scenarios

Impact = High, Assigned To empty, State edited from the list, and Impact changed back to Medium.

Define your problem statement

Frame the problem as a How Might We statement. This is the focus of the brainstorm.

🕒 5 minutes

PROBLEM

How might we enforce consistent and accurate data entry on Incident forms so high-impact incidents are complete, correctly routed and reliable for SLA and reporting?

Key rules of brainstorming

To run a smooth and productive session

- ☐ Stay in topic.
- ☐ Encourage wild ideas.
- ☐ Defer judgment.
- ☐ Listen to others.
- ☐ Go for volume.
- ☐ If possible, be visual.

Step-2: Brainstorm, Idea Listing and Grouping

2 Brainstorm

Ideas written down by each participant that address the problem statement.

TIP

Each person adds their own sticky notes so every idea gets captured first and judged later.

🕒 10 minutes

Person 1	Person 2	Person 3	Person 4	Person 5
Make Assignment group mandatory when Impact is High	Auto-set Urgency to 1 - High when Impact is High	Block save if Assigned To is empty for High impact	Block State edits made from the list view	Document policy names and conditions clearly
Make Urgency read-only when Impact is High	Show an info message after Urgency is set	Show an error box beside the Assigned To field	Show an alert: open the Incident to change State	Show helpful field messages to guide agents
Reverse the changes when Impact is no longer High	Run only on user change, not on form load	Return false in onSubmit to stop the save	Cancel the list edit with an onCellEdit callback	Standardise data-entry rules for more fields
Name the policy clearly: High Impact Control	Use an onChange script on the Impact field	Allow save once all conditions are met	Keep State changes on the form allowed	Package the rules as an update set
Add a server-side Data Policy as a backup	Auto-populate Assignment group from Category	Test both a failing and a passing save	Dashboard to track incomplete incidents	Extend the same pattern to Problem and Change

3 Group ideas

Similar ideas clustered together, each cluster given a sentence-like label.

TIP

Keep clusters to six notes or fewer; split bigger ones into smaller sub-groups.

🕒 20 minutes

Control field behavior when Impact is High (UI Policy) - Mandatory Assignment group - Urgency read-only - Reverse if false	Automate values when Impact changes (onChange) - Auto-set Urgency to High - Info message shown - Skip on form load
Stop incomplete records at save time (onSubmit) - Block save without Assigned To - Error box on the field - Allow valid saves	Protect State from list editing (onCellEdit) - Alert on list edit - Cancel the change - Form updates still allowed
Extend and monitor the solution Data Policy backup Auto-populate Assignment group Data-quality dashboard Positive and negative testing	

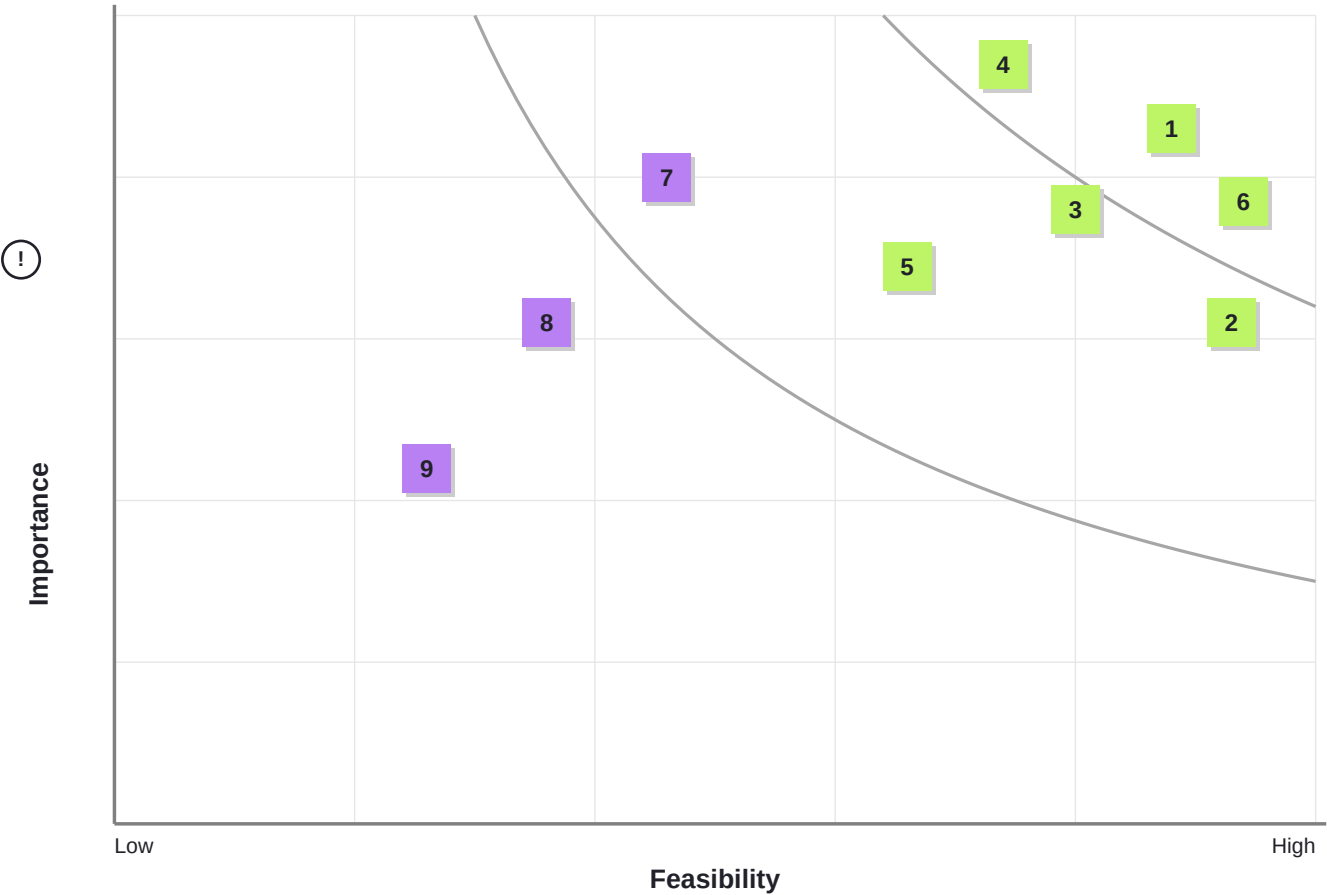

Step-3: Idea Prioritization

4 Prioritize

Place the ideas on the grid to decide which are important and which are feasible.

🕒 20 minutes

TIP
Cursors point to where each note goes on the grid; the facilitator confirms the spot.

#	Idea	Importance (0-10)	Feasibility (0-10)	Decision
1	Mandatory Assignment group for High impact	8.6	8.8	Implemented - Task 1
2	Urgency read-only for High impact	6.2	9.3	Implemented - Task 2
3	Auto-set Urgency on Impact change	7.6	8.0	Implemented - Task 3
4	Block save without Assigned To	9.4	7.4	Implemented - Task 4
5	Block State edits from list view	6.9	6.6	Implemented - Task 5
6	Reverse changes when Impact is not High	7.7	9.4	Implemented - Task 1
7	Server-side Data Policy backup	8.0	4.6	Future enhancement
8	Auto-populate Assignment group by Category	6.2	3.6	Future enhancement
9	Data-quality dashboard	4.4	2.6	Future enhancement

Green notes = selected for this project; purple notes = future enhancements.
