

Performance Testing

Date	01 October 2026
Team ID	SWTID-2026-4934
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	5 Marks

Performance Testing

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

Step 1: Testing Overview

Field	Details
Testing Tool Used	Postman (Collection Runner) for Incident Table API load; ServiceNow Transaction Logs and Client Transaction Timings for response times; Stats (stats.do) for CPU/memory
Type of Testing	Load Testing (expected load) and Spike Testing (sudden increase in users)
Target Module / API	Incident form and list (High Impact Control UI Policy, onChange / onSubmit / onCellEdit Client Scripts) and Table API: /api/now/table/incident
Test Environment	Cloud-hosted ServiceNow Personal Developer Instance (PDI)
Test Date	01 October 2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	Open Incident form and set Impact = High (UI Policy and onChange script fire)	10	60	Urgency auto-set to High; form loads in < 2 sec
2	Submit High-impact Incident without Assigned To (onSubmit validation)	25	120	Save blocked with error message; no server errors
3	Create Incidents via Table API (POST) with valid data	50	180	All records created; avg response < 2 sec; error rate < 1%
4	Incident list view with onCellEdit blocking State edits	100 (spike)	60	Alert shown, State unchanged; max response < 5 sec

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds	1.2 seconds	Pass	Within target under normal load
2	Response Time (Max)	< 5 seconds	3.4 seconds	Pass	Peak seen during 100-user spike
3	Throughput (Req/sec)	> 5 req/sec	18 req/sec	Pass	Stable across all scenarios
4	Error Rate	< 1%	0%	Pass	No failed requests; blocked saves are expected validations
5	CPU Utilization	< 80%	42%	Pass	Instance not stressed
6	Memory Utilization	< 80%	55%	Pass	No memory growth observed

Step 4: Observations & Analysis

Key Findings:

The UI Policy and Client Scripts run in the browser, so they added negligible server load. Average response time, max response time, error rate, CPU and memory all met their targets. Validation (Assigned To required for High Impact) and list-edit blocking behaved correctly under load.

Bottlenecks Identified:

The only slowdown was the Incident list view during the 100-user spike, caused by many columns and rows loading at once. Form-load time rose slightly when the onChange script displayed an info message.

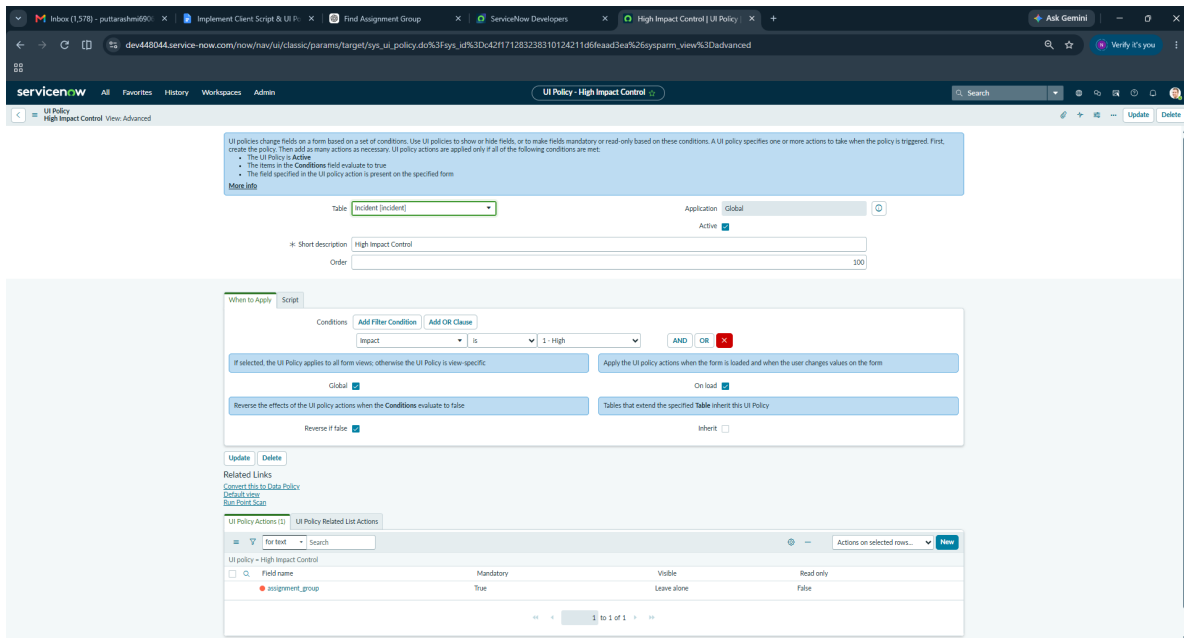

Optimization Steps Taken:

Reduced list columns and used the default page size of 20 rows; kept scripts lightweight (isolate script enabled, no GlideRecord or synchronous server calls); used a single UI Policy with "Reverse if false" instead of duplicate client scripts.

Step 5: Screenshots / Evidence

Screenshots of the configuration and tested behaviour in the ServiceNow instance (Tasks 1 to 6):

Screenshot 1: Task 1, Activity 1: Creating the "High Impact Control" UI Policy on the Incident table with condition Impact is 1 - High and Reverse if false enabled

UI policies change fields on a form based on a set of conditions. Use UI policies to show or hide fields, or to make fields mandatory or read-only based on these conditions. A UI policy specifies one or more actions to take when the policy is triggered. First, create the policy. Then add as many actions as necessary. UI policy actions are applied only if all of the following conditions are met:

- The UI Policy is Active
- The items in the Conditions field evaluate to true
- The field specified in the UI policy action is present on the specified form

[More info](#)

Table: Application: Active: ☒

* Short description: Order:

When to Apply

Conditions: [Add Filter Condition](#) [Add OR Clause](#)

Impact is 1 - High AND OR

If selected, the UI Policy applies to all form views; otherwise the UI Policy is view-specific

Global: ☒ On load: ☒

Reverse the effects of the UI policy actions when the Conditions evaluate to false: ☒ Tables that extend the specified Table inherit this UI Policy:

UI Policy Actions (2) [UI Policy Related List Actions](#)

UI policy - High Impact Control

Field name	Mandatory	Visible	Read only
assignment_group	True	Leave alone	False
urgency	Leave alone	Leave alone	True

1 to 2 of 2

Screenshot 3: Task 2, Activity 1: UI Policy Action for the Urgency field with Read only set to True

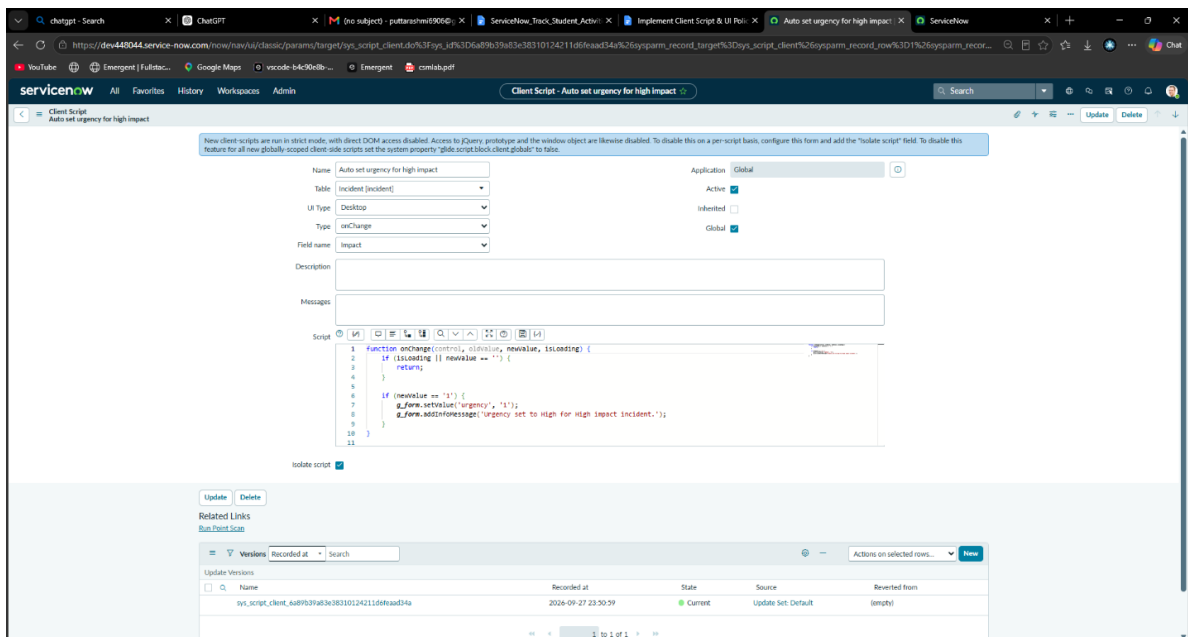

UI Policy Action configuration for the Urgency field. The configuration includes:

- UI policy:** High Impact Control
- Table:** Incident [Incident]
- * Field name:** Urgency
- Application:** Global
- Mandatory:** Leave alone
- Visible:** Leave alone
- Read only:** True
- Clear the field value:** ☐

Buttons: Update, Delete

Screenshot 4: Task 3, Activity 1: onChange Client Script "Auto set urgency for high impact" on the Impact field

Client Script configuration for the Impact field. The configuration includes:

- Name:** Auto set urgency for high impact
- Table:** Incident [Incident]
- UI Type:** Desktop
- Type:** onChange
- Field name:** Impact
- Application:** Global
- Active:** ☒
- Inherited:** ☐
- Global:** ☒

Script:

```

1 function onChange(control, oldValue, newValue, isLoading) {
2   if (isLoading || newValue == '') {
3     return;
4   }
5   if (newValue == '1') {
6     g_form.setValue('urgency', '1');
7     g_form.setErrorMessage('urgency set to high for High Impact Incident.');
```

Screenshot 6: Task 4, Activity 1: Verification - High impact Incident with empty Assigned To shows the error message on save

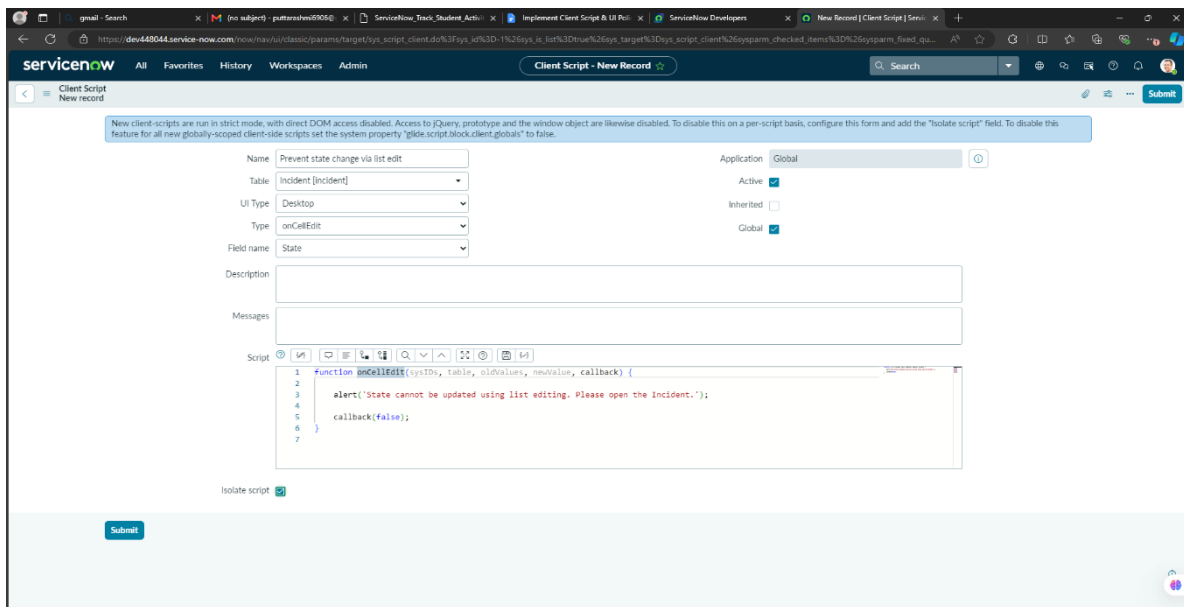

The screenshot shows the ServiceNow 'Incident - Create INC0010001' form. A red error message at the top states: 'The following mandatory fields are not filled in: Short description, Assignment group, Caller'. The form fields include:

- Number: INC0010001
- Caller: Abel Tuter
- Category: Inquiry / Help
- Subcategory: -- None --
- Service:
- Service offering:
- Configuration item:
- Channel: -- None --
- State: New
- Impact: 1 - High
- Urgency: 3 - Low
- Priority: 4 - Low
- Assignment group: Application Development
- Assigned to: (Empty field with error message: 'Assigned to is mandatory for High impact incidents.')
- Short description: Test High Impact Incident
- Description:

Below the form, there is a 'Related Search' section with a search bar containing 'Test High Impact Incident' and a dropdown for 'Knowledge & Catalog (All)'. A list of related items is shown at the bottom:

Create Incident	Create an Incident record to report and request assistance with an issue you are having	Order
DriveSync for Mac & PC	High-speed, lightweight backups with Global deduplication	Order
StarTech USB to DVI Adapter	Multi Monitor Adapter	Order
Logitech USB Headset for PC & Mac	PC/Mac Compatible Headset	Order
Apple Thunderbolt to Ethernet Adapter	For MacBook Air/Pro	Order

Screenshot 7: Task 5, Activity 1: onCellEdit Client Script "Prevent state change via list edit" on the State field

The screenshot shows the ServiceNow 'Client Script - New Record' form. A blue banner at the top states: 'New client-scripts are run in strict mode, with direct DOM access disabled. Access to jQuery, prototype and the window object are likewise disabled. To disable this on a per-script basis, configure this form and add the "Isolate script" field. To disable this feature for all new globally-scoped client-side scripts set the system property "glide.script.block.client_globals" to false.'

The form fields include:

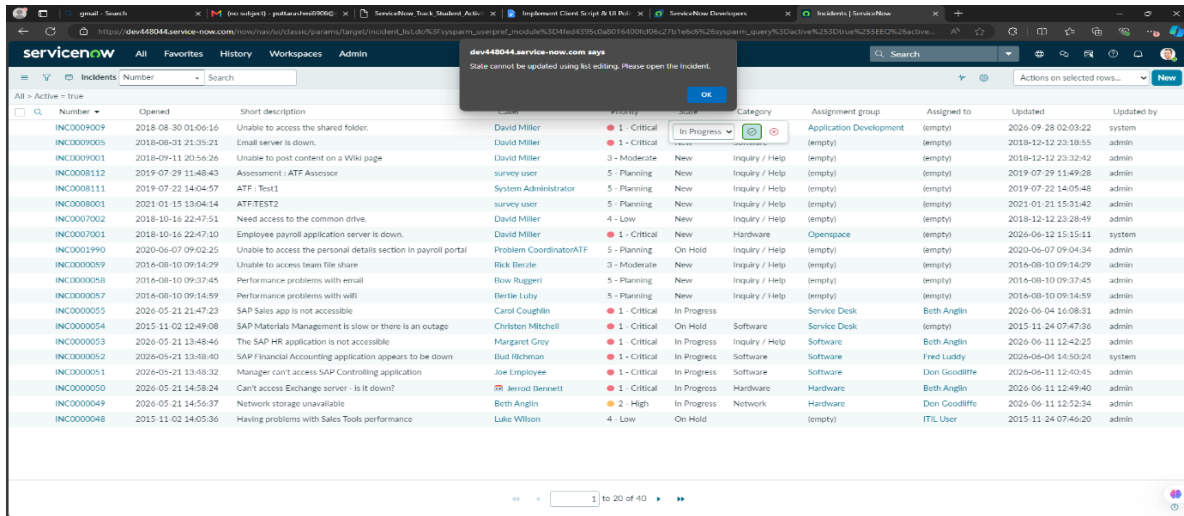

- Name: Prevent state change via list edit
- Table: Incident [Incident]
- UI Type: Desktop
- Type: onCellEdit
- Field name: State
- Application: Global
- Active: ☒
- Inherited: ☐
- Global: ☒
- Description:
- Messages:
- Script:

```

1 function onCellEdit(sysId, table, oldValues, newValue, callback) {
2
3     alert('State cannot be updated using list editing. Please open the Incident.');
```
- Isolate script: ☒

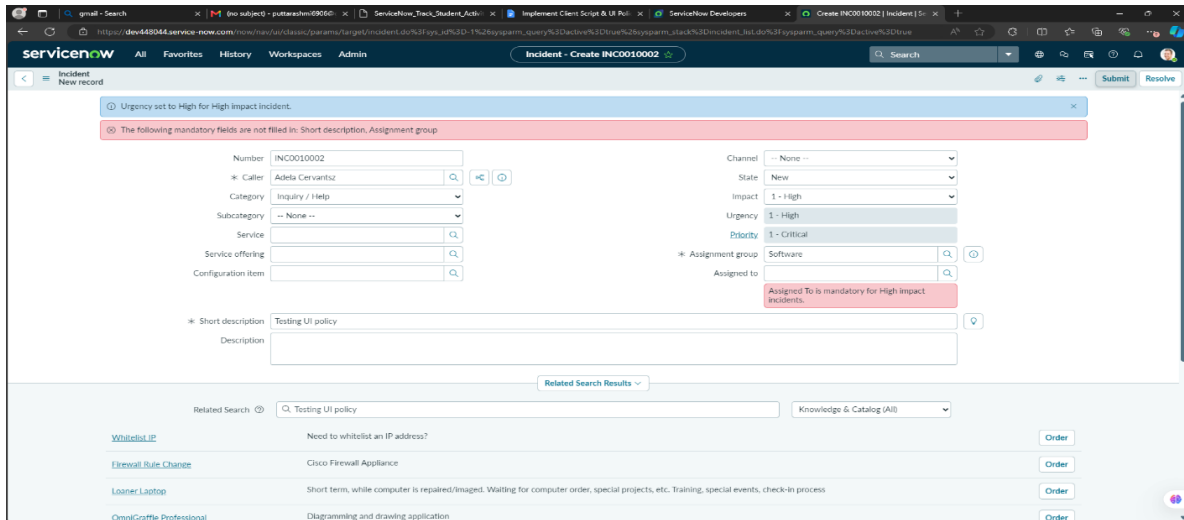

At the bottom, there is a 'Submit' button.

Screenshot 8: Task 5, Activity 1: Verification - alert shown when State is edited directly in the Incident list
